World's First! New fashion standard in Web3.0 era, Metaverse (PAT.P)
Japanese Anime, Manga, Games x NFT Apparel
"XRT" announced by HKSK Studios.

Blockchain technology make a fusion of real apparel
which you can enjoy AR experience and digital apparel using NFT.

HKSK Studios (AKAGI / HKSK) is pleased to announce the "XRT" project, a new fashion standard for the Web 3.0 / Metaverse era, which utilizes a new technology (patent pending) to link digital apparel (NFT) with real apparel. HKSK Studios is a creative studio that aims to build relationships in a new age, free from the constraints of the virtual and the digital.

"XRT (XR T-Shirt)" is a fashion product that allows you to enjoy AR expressions. It consists of a "real apparel" that can actually be worn and an "NFT" that proves ownership and usage rights. By activating

filters on Instagram and other platforms from the original NFC chip installed on the apparel and reading the printed design with a smartphone, you can enjoy various AR expressions. We plan to launch original brands that are currently in preparation for sale this summer, as well as various collaboration items.

Regarding the technology that is currently pending patent application, HSKK has developed a technology that links real items and digital items using blockchain technology.

Scalability: Can link all real items

With this technology, it is possible to link not only limited items but also almost all real items with digital items (NFT).

Productivity: Mass production is possible at factories

With conventional linking technologies, providing real items required more work at the factory and was not suitable for mass production. However, our technology has made mass production possible.

Convenience: Easy to introduce

HSKK is currently developing a platform that can easily produce and distribute items that are linked in real and digital using the technology above.

HSKK Studios

We are a creative studio that aims to build relationships in a new era, unconstrained by the constraints of real and virtual, through products that combine CULTURE × CREATIVE × TECHNOLOGY.
