

INNOVATION AWARD LVMH

First in Japan!

Jikantechno Inc. is one of the 18 finalists of the LVMHInnovationAward !

They will be showcasing their technologies at the LVMH booth during VIVA TECHNOLOGY 2024, Europe's largest tech event held in Paris, France in May.

We're super excited to announce that we've been selected among 1,545 candidates from 89 countries as one of the finalist of the #LVMHInnovationAward.

What an opportunity for us to be present on the LVMH Booth at @VivaTechnology from May 22 to 25 in Paris and to showcase our solution!

* This is the first time a Japanese startup company has been selected as a finalist for this award.

This year, two Japanese companies were selected.

Until now, agricultural residues such as rice husks and barley husks have merely been used as fertilizers or animal feed. However, thanks to our technology, we can now convert these residues into high-value-added products such as high-purity silica and carbon at appropriate prices.

We perceive the recognition from LVMH, the world luxury leader known for its rigorous pursuit of circular economy and carbon neutrality, as a validation of our technology.

Stay tuned as the ceremony will be held on the main stage at VivaTech on May 23rd to reveal the winners. We're beyond thrilled to start this journey with LVMH and to make our dream become reality.
