Discount sale now on for the download version and the
limited-quantity package version!

Techno-Speech, Inc. (headquarters: Higashi-ku, Nagoya; Representative Director: Keiichiro Oura, hereinafter "Techno-Speech") announces that the new bilingual voice library "Bennett Fantasia (CV: Du Du Danyon)" (planned and operated by VoCreatures Pty, Ltd.) for the singing voice synthesis software "VoiSona," which realistically reproduces human singing voices using the latest technology, has been released on September 27, 2026.

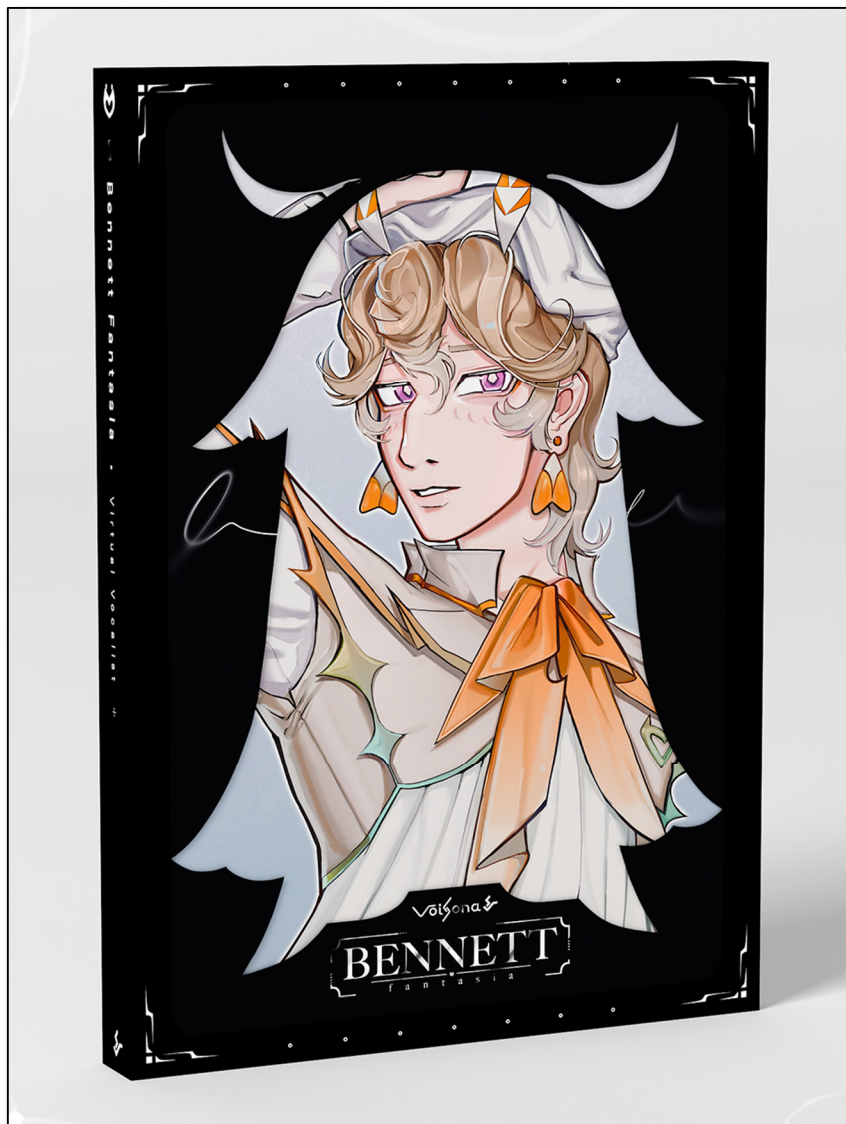

Bennett Fantasia is a voice library born from Bennett, a character created by the Australian company "VoCreatures Pty, Ltd." He first appeared in 2023 as a voice bank for UTAU/OpenUTAU, and gained support for his androgynous singing voice that supports singing in both English and Japanese. The VoiSona version supports singing in both Australian English and Japanese, and is

designed so that users can make use of it in a wide range of music production, including operatic styles. In addition, his androgynous singing voice with a rich vocal range enables a wide range of vocal expressions to suit different music genres and creative intentions.

[About VoiSona]

"VoiSona" is a singing voice synthesis software that realistically reproduces human singing voices using the latest technology. The name "VoiSona" combines "Voice," meaning sound, and "Persona," meaning personality or charm, reflecting the goal of expressing diverse personalities through voice. The software supports both voice providers and creators, aiming to create a mutually beneficial ecosystem.

Based on the singing voice synthesis technology that Techno-Speech has built up over many years, the software is available on Windows, macOS, iOS, and iPadOS with VSTi/Audio Units support, making it easier to use and capable of meeting professional needs. It comes with a default Japanese voice library called "Chis-A" with a neutral tone. A simple standalone application is also included, so it can be used by those who do not have a DAW that supports VSTi/Audio Units. Audio waveform data output using "VoiSona" and "Chis-A" can, with some exceptions, generally be used free of charge by individuals and corporations alike, for both commercial and non-commercial purposes.

- ✓ Product name: VoiSona
 - ✓ Official website: <https://voisona.com/>
 - ✓ Release date: September 1, 2022
 - ✓ Format: Download
 - ✓ Price: Free for the "VoiSona" main software and the standard Japanese voice library "Chis-A." * Additional voice libraries are available for purchase.
- * Registration on the official website is required.

[System requirements for VoiSona]

- ✓ Supported OS: Windows 11 / Windows 10 (64-bit, 22H2 or later), macOS 11 (Big Sur) to 26 (Tahoe), iOS 17 to 26, iPadOS 17 to 26
- ✓ CPU
 - Windows: Intel/AMD processors (Intel Core i5 (4th Gen) or higher, or equivalent AMD processors recommended.)
 - macOS: Apple Silicon/Intel processors (Apple Silicon or Intel Core i5

(4th Gen) or higher recommended.)

- iOS/iPadOS: iPhone 12 or later, or iPad (10th generation) or later recommended

* If processing performance is low, there may be sound skipping during playback. (There is no issue with file output.)

- ✓ Memory: 4GB or more (8GB or more recommended)
- ✓ HDD: At least 1GB of free space for installation
- ✓ Graphics: 1280 x 720 or higher resolution in full color
- ✓ DAW: A DAW that supports VSTi/Audio Units. * In some cases, VoiSona can synchronize the playback position of the DAW. * VoiSona can also be used as a standalone application in an environment without a DAW.

* Internet connection required for use.
