

ABOUT SIRIN LABS

SIRIN LABS is developing the FINNEY™ – the premier open source, ultra-secure blockchain smartphone with an embedded cold storage crypto wallet. Our vision is to bridge the gap between the blockchain economy and the mass market by solving the two greatest barriers to the crypto market: security and user experience.

After concluding the 4th largest ICO in history (with over \$157.8 million contributed), and through the experience gained from the production of the first SIRIN LABS phone, the SOLARIN™ (a phone globally recognized as one of the most secure phones in the world), SIRIN LABS has paved the way for the technological advances we are able to bring forth in FINNEY™.

FINNEY™ will be running the SIRIN OS™, an ultra-secure and Google certified “fork” of Android, and SIRIN LABS is in the midst of conversations with many of the top OEM phone developers regarding having them use the SIRIN OS™ in upcoming blockchain-enabled smartphones.

SIRIN LABS has already established strategic partnerships with industry leaders like Cardano and FIH (Foxconn International Holdings— makers of the iPhone, Xbox and Kindle), and has signed on the world’s greatest footballer, FC Barcelona’s Leo Messi, as our official global brand ambassador.

THE BEST OFFENSE

THE BEST DEFENSE

Come join us today to offer a really secure blockchain experience embedded into the phone of the most enthusiastic crypto-addict community around the world.
